SAFETY GUIDELINES - PLEASE READ BEFORE USE

⚠️ WARNING: Important! Read and understand these instructions before using the Manual Resuscitator. Do not use this product unless you have been instructed in its use by a qualified healthcare professional. If the Manual Resuscitator is not properly assembled, personal injury and/or damage to the Manual Resuscitator could result.

⚠️ WARNING: Test the product functions before using this product on a patient.

⚠️ WARNING: Important: This resuscitator is intended for use on an adult with a minimum body weight of 66 lb. (30 kg).

⚠️ WARNING: This resuscitator is intended for single patient use.

⚠️ WARNING: Do not use this product in a toxic atmosphere, or in the presence of sparks, flame, or smoking materials. Do not allow smoking. Fire and/or personal injury could result.

⚠️ WARNING: If components are damaged or missing, contact your dealer immediately. DO NOT use substitute parts.

⚠️ WARNING: GF Health Products, Inc. assumes no responsibility for any damage or injury caused by improper installation or use of this product.

▲ Caution: For best performance of this product, use within three years from the date of manufacture.

ASSEMBLY

⚠️ WARNING: Do not remove the pop-off valve.

1. Use your hands to pull the resuscitator out from both sides.

2. Assemble the patient valve, reservoir bag and resuscitator. Ensure that all connections are secure.

3. Connect the mask to the patient valve.

4. Optional: Connect the oxygen tube to a regulated oxygen source.

5. Adjust the oxygen flow so that the reservoir bag expands completely during inspiration, and nearly collapses as the squeeze bulb refills during exhalation.

6. Before connecting the manual resuscitator to a patient, check the function of both resuscitator and mask; ensure that all connections are secure and that the intake valve, reservoir bag and patient valve allow all phases of the ventilation without any leakage.
OPERATION

1. Install the mask carefully onto the patient’s face so that it covers the nose and jaw.
2. Hold the mask with thumb and forefinger; use other hand to ensure that the mask is properly attached to the patient’s face.
3. Compress the squeeze bulb to deliver a breath; before continuing, ensure that the patient’s chest rises to confirm inspiration.
4. Release pressure on the squeeze bulb to allow exhalation; before continuing, ensure that the patient’s chest falls to confirm exhalation.

IF THE PATIENT VALVE BECOMES CONTAMINATED OR IF PATIENT VOMITS

Remove the Manual Resuscitator from the patient and clear the valve as follows:
1. Disassemble the contaminated components.
2. Compress the squeeze bulb rapidly to deliver several sharp breaths; this should expel the contaminant.
3. Rinse the patient valve in water and then compress the squeeze bulb rapidly to deliver several breaths to expel the contaminant.
4. If the contaminant still does not clear, discard the resuscitator.
